## Precautions

Precautions	OS	Preventive measures
Uncorrectable errors of multiple RAID cards occur during installation of SVIM.	No limitation for OS	The number of LAN ports per server base unit should be max. 96. The number of LAN ports per Hardware Partitioning should be less than 96.
If booting of OS via SAN-Boot using multi-path cards fails because of error in the path, booting of OS does not complete even via alternative path.	No limitation for OS	No preventive measure
To execute hot plug operations of FC cards while running OCM, restart of OS is required.	Windows Server	To close OCM monitor before PHP operations.
Multiple paths between IOU with 1Gbps LAN and IOU with 10Gbps LAN is NOT allowed.	Windows Server	No preventive measure
MMB and remote PC MUST BE connected by text console redirection.	Red Hat Enterprise Linux	Set "console=tty0" by kernel command line to use VGA or telnet.
"System Progress" status in MMB WebUI does not change into "OS Running"	ESXi 5.1u2(UEFI)	it is necessary to insert the following commands at the system console:  ~ # vmkload_mod /usr/lib/vmware/vmkmod/ipmi_devintf ~ # vmkload_mod /usr/lib/vmware/vmkmod/ipmi_si_drv ports=0x0E02 ~ # esxcfg-module -s 'ports=0x0E02' ipmi_si_drv
vSphere client does not recognize FCoE cards as storage or network adapter.	ESXi 5.x	Install FCoE driver. SW-ID: 1111648

		4	all

Because VMware vSphere 5 does not make Segment Mode available, only VMware poses limitation for available number of SB, IOU.

The largest configuration for one server must follow limitation below

- (1) If Number of SB is 4, max. number of IOU is 2
- (2) If number of SB is 3 max number of IOU can be 4
- (3) If number of SB is 2, no specific limitation on number of IOU
