

MODERNIZE YOUR SAP LANDSCAPE WITH PRIMEFLEX FOR NUTANIX ENTERPRISE CLOUD

Your SAP application environment should be at the center of your digital transformation strategy. But is your old systems landscape holding you back, as well as consuming a lot of time and effort to manage? It's time to modernize.

Focus on business outcomes

Get away from the mindset of regarding any SAP upgrade as a chore to be put off, and focus on the opportunities and benefits that stem from modernization. Think holistically when defining modernization goals, considering the value for both the business and the IT and applications support teams.

Redefine platform needs

OLDER SYSTEM LANDSCAPES

RIGID
COMPLEX
PHYSICAL
FIXED
COSTLY
DEDICATED

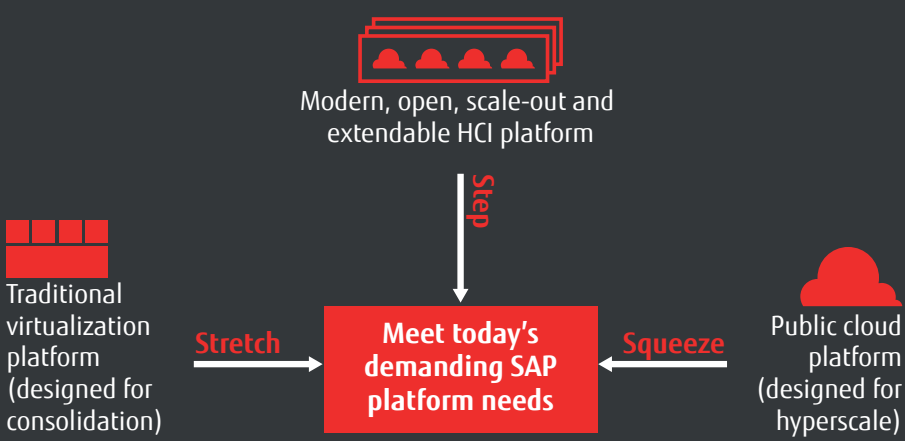

MODERN APPLICATION PLATFORMS

FLEXIBLE
SIMPLE
VIRTUAL
SCALABLE
EFFICIENT
SHARED

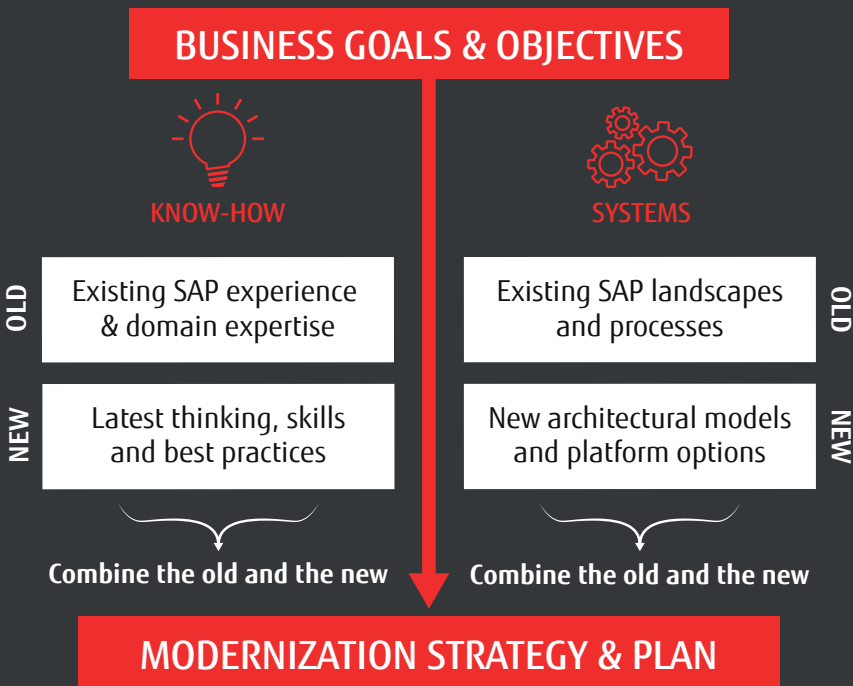

Platform needs are changing, particularly in relation to flexibility, scalability, simplicity and efficiency. Any new platform you put into place must be change-friendly and able to stand up to the unpredictability of the digital new normal. It also needs to be S/4HANA-ready to smooth current and future migrations.

Identify the right approach

You could stretch your current virtualization environment or squeeze down your preferred public cloud platform for local deployment. If you're not constrained by past choices, however, it can be better to start afresh with a modern hyperconverged infrastructure (HCI) solution designed from the outset to meet today's needs.

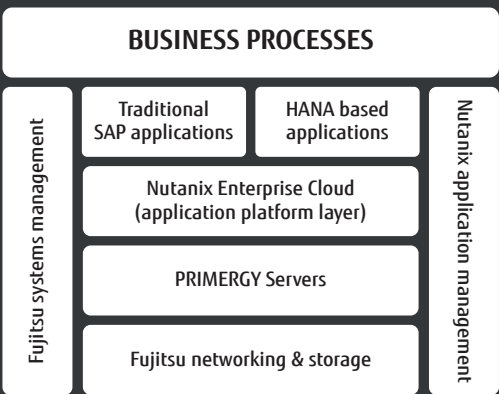

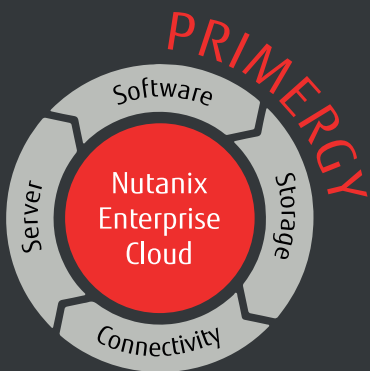

Bring the old and the new together

New architectural models and the latest thinking and best practices open up an exciting range of possibilities to take agility, performance, scalability and efficiency to the next level. You need to trust your instincts, however, when they tell you that what mattered previously when delivering business critical systems will remain important in the future. It's about building on accumulated knowhow and discipline rather than throwing everything out and starting again.

Work with the right solutions from the right partners

Fujitsu's strong SAP heritage and enterprise class hardware and tools have been brought together with state-of-the-art HCI from Nutanix to create PRIMEFLEX for Nutanix Enterprise Cloud. This integrated platform will accelerate your SAP modernization initiative and provide a strong platform for growth and digital evolution.
