

Datasheet Fujitsu Retail Business Analytics Loss Prevention Module

Simple Turn-Key Retail Business Intelligence.

Business Intelligence

Business Intelligence (BI) – the capture, analysis and exploitation of data – is often difficult

to define and hard to execute in retail organisations. Due to the technical challenges, t is

easy to make the data and IT architecture the prime focus, rather than servicing the needs of business users.

Most retailers use multiple data sources and systems to retrieve the data which then needs to be transformed into useful information in the form of business focussed reports. Some large retailers have invested in data warehousing and analytics tools to provide advanced

reporting to the business, however a large proportion of retailers still rely on basic reporting

and spreadsheet tools which are highly customised, give a fragmented view of the business.

are labour intensive and offer poor cost effectiveness.

The move to standard reporting tools and operations analysis is an extremely challenging

project for any organization and entails a substantial level of risk as well as a long-term

Retail Business Analytics (RBA)

One of the fundamental processes within a Business Intelligence Project is the ETL process (Extract, Transform, Load), where specific industry business rules, analysis measures and methodologies from multiple data sources, together with specific user needs converge and need to be effectively managed. Retail Business Analytics includes different components:

- A parametric ETL Software to feed data marts, originating from any data source This element includes graphical tools to manage data load and specific tools to schedule different events.
- A modular ARTS compliant data module, which is ready to ensure that both the current and future requirements of the retailer are satisfied.
- A suite of analysis modules specific for Retail functions, each of which includes a turnkey set of Operating Reports, Dashboards and Performance Indicators.

HIGHEST SCALABILITY, MODULARITY AND FLEXIBILITY

Retail Business Analytics is a simple, flexible and modular solution. Its ETL Engine is the standardised base for all the released and enabled

modules. Every module can be independently installed and activated. After the first module installation, each customer is free to choose if and when a second module is needed, and then a simple installation activates the module within the environment. Each analytics environment is provided with a full comprehensive set of operations reports covering the application of Retail specific business rules and best practice(s) from Fujitsu's experience in supporting the most valuable players in this industry for over 30 years.

SIMPLE TO USE, READY TO GO

Every user has access to the reporting set through aWeb interface where they can perform analysis, create new reports and dashboards on the enabled data set and can also share documents and reports with other company users via email or schedule the automatic document generation and distribution to defined mailing lists. The user interface is simple, powerful and extremely easy to use. Fujitsu's RB is designed for Business Users without any technical or programming knowledge, nor any Business Intelligence development skill.

Features

Key Features	Benefits
Enterprise class, Multi-Platform and Multi-Language BI Suite focused on Retail Departments and Functions	■ Immediate operability ensured. A large catalogue of different reports are pre-defined and ready to use or be modified in order to rapidly build insights for business users.
Modular, Scalable and Customisable	■ RBA can grow in a scalable and modular pattern. Each module and component can be activated on demand and it is always possible to develop extensions or bespoke analysis environments. The business themselves can take advantage of the technology to develop new reports and dashboards based on existing data model.
Ready to use	■ The solution is a turn-key suite of tested technologies, reports and dashboards that will reduce your project risk to zero. A Demo with your business data can be matched in days. The easy of use and simple interface makes it a "zero training" application, transforming users into effective analysts in hours.

■ Marketing

■ Sales

Specification

- Focused on transactions from identified customers. Benefit 2 uses capacitor technology to better protect RAID controller cache during power outages
- Direct analysis makes it possible to generate reports based on sales data, further identifying and illustrating results by customer sub-segments. These segments are identified both from demographics and from customer purchase behavior analysis.
- Indirect analysis makes it possible to analyse customers at a group level, allowing dynamic customer profiling and tracking of identified customers in each reporting period and enabling the management of flexible customer profiles. It is possible to have a transparent view and understanding of the progression of each customer group, enabling a better understanding of the impact of promotions, marketing campaigns, mailing, recalls and so on.
- Designed to analyse sales transactions from a Retailer and its Customers
- It considers every Sale and every Refund that has taken place
- Product and Time granularity can be analysed at the lowest level of detail
- Every analysis can be drilled down to the daily and hourly level

FUJITSU

Additional Information

Fujitsu platform solutions

In addition to Fujitsu Mini Counter Self-Checkout, Fujitsu provides a range of platform solutions. They combine reliable Fujitsu products with the best in services, know-how and worldwide partnerships.

Dynamic Infrastructures

With the Fujitsu Dynamic Infrastructures approach, Fujitsu offers a full portfolio of IT products, solutions and services, ranging from clients to datacenter solutions, Managed Infrastructure and Infrastructure-as-a-Service. How much you benefit from Fujitsu technologies and services depends on the level of cooperation you choose. This takes IT flexibility and efficiency to the next level.

Computing products
