The PaperStream Software Portfolio

The software family for Fujitsu Image Scanner Solutions

Unlocking the value of information, and increasing organisational productivity

PS PaperStream

Enabling the world's flow of knowledge

Software Portfolio

PaperStream software solutions are the foundation that allow Fujitsu Image Scanners to the remain the world's most trusted scanning technology, by making it easy for organisations to digitise their workflows. This in turn helps to unlock the value of their information, enhancing both their organisational productivity and their Organisational Intelligence.
The PaperStream portfolio is a unified family of applications which have been developed to seamlessly operate in harmony with one another and Fujitsu Image Scanners.

By consistently delivering exceptional quality images, PaperStream software reduces downstream process costs, while also optimising capture processes through the use of workflow automation.

The foundation of quality scanning

As the driver for all Fujitsu Image Scanners, **PaperStream IP** is the foundation of quality scanning, automatically ensuring scanned documents are converted into high-quality images, helping reduce operational cost and supporting downstreamOCR processing.

Exceptional Quality Images	Simple Operation
Advanced Cleanup Technology	Simple profile creation
iDTC - highest data accuracy for OCR	Assisted Scan
Automatic image correction	Automatic Profile Selection
Optimised file sizes	SDK for custom integrations

PaperStream IP Net - Liberated Scanner Connectivity

Delivering all the benefits of **PaperStream IP, PaperStream IP Net** is a locally deployed scanner driver for organisations that want to free themselves from traditional, rigid scanning architectures, liberating scanner connectivity to allow them to scan from-any-to-any device for enhanced flexibility and hardware cost reductions.
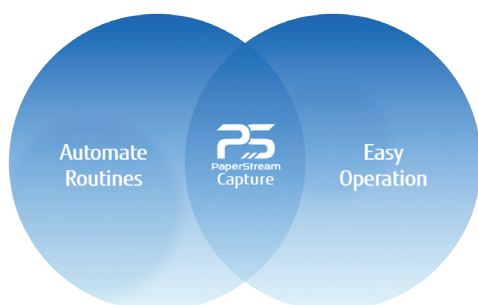

Connect Everything	Enhanced Flexibility
Network enabled scanning	Deploy scanners to suit exact network architecture
Connect using LAN or Wi-Fi	Reconfigure as fleet evolves
Any Fujitsu scanner from any PC	Freedom for scanner location
	Reduce unnecessary hardware costs

PaperStream Capture

The power of automation for more efficient workflows

PaperStream Capture makes it easy to automate the batch capture process, helping customers boost their organisational productivity with more streamlined and economical digital workflows..
Automate Routines	Easy Operation
Zonal OCR, patch code and barcode recognition	Quick profile creation
Meta Data extraction	Profile driven operation
Automatic Image Quality Check	All-in-one post-scan review window
Results-led image optimisation	Batch Manager

PaperStream Capture Pro

Maximise economies of scale for advanced digital workflows

Delivering all the benefits of PaperStream Capture but taking them a step further, upgrading to **PaperStream Capture Pro** enables organisations with heavy scanning needs to re-engineer the capture process itself, scaling both throughput and associated efficiency gains.
Maximise Efficiency	Maximise Scalability
After Scan Correction	Separate and stack Scan/Extract/Release activities
Up to 100 advanced meta data fields	Parallel capture process stacking
Advance text OCR	Multiple workstation environment
Expanded meta data field attributes	Monitor usage data
Streamlining API	Multi-format file support

PaperStream ClickScan

Easily handle ad-hoc scanning requirements

PaperStream ClickScan allows scanners to effortlessly handle ad-hoc scanning without the need for configuration, keeping organisations productive and running smoothly.
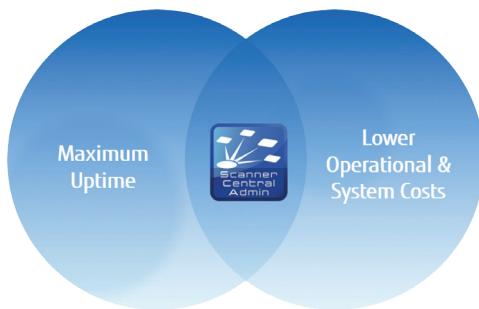

Ready-to-scan	Time saving
One touch, instant scanning	Scan directly to a pre-specified destination
No configuration required	Intuitive, easy-to-use interface
Scan, then save to selected destination	Preview and edit capabilities

Scanner Central Admin

Scanner management made easy

Scanner Central Admin is an innovative piece of server-based software that allows efficient management and monitoring of multiple scanners. This enables organisations to maximise uptime while reducing the time and cost of installing, maintaining and operating them.

Maximum Uptime	Lower Operational & System Costs
Single-screen network overview	Remote management for up to 1,000 scanners
Real-time email & console hardware alerts	Eliminate uneccessary in-person visits
Simultaneous updates to any scanners	Monitor, provision, configure, and update
	All from one software application

PaperStream
NX Manager

PaperStream NX Manager is software that enables centralised, server-based capture solutions.
