

Data Sheet Fujitsu PRIMERGY RX2450 M2 Rack Server

Powerful server that serves your performance and security requirements

Fujitsu offers a fantastic blend of systems, solutions and expertise to quarantee maximum productivity, efficiency and flexibility, delivering confidence and reliability. Fujitsu PRIMERGY servers deliver workload-optimized x86 industry standard systems for any workload and business demand. Since there is no single server solution to meet all these needs, Fujitsu offers a broad server portfolio consisting of expandable tower servers, versatile rack-mount servers, density-optimized multi-node servers as well as GPU servers purpose-built for the demands of AI and VDI. While all these systems are designed to handle multiple workloads, each server is optimized for specific use cases. Whatever the size of your business – large enterprise with multiple sites, or a small or medium-sized company with limited space and budget - with the right choice of server, your IT can become the business enabler you have always wanted it to be.

PRIMERGY RX2450 M2

The Fujitsu PRIMERGY RX2450 M2 is a dualsocket 2U rack server that delivers high core count performance combined with flexible configuration options. Powered by the 4th Gen AMD EPYC™ processors, the server system is ideal for traditional and emerging workloads such as generative AI, LLM deep learning, virtualized and cloud computing environments, HPC and other data-intensive workloads. The PRIMERGY RX2450 M2 can be equipped with two AMD EPYC™ CPU's featuring up to 128 cores each, PRIMERGY RX2450 M2 provides a silicon root of trust feature to help protect against platform firmware attacks and is designed to detect and correct them before they can compromise or disable the machine. Along with enhanced DDR5 memory technology supporting 4,800 MT/s, the server features maximum memory capacity provided by 24 DIMM slots in total supporting 6TB of memory. The instructions per clock increase of the latest

AMD EPYC™ processors compared to the previous generation as well as the capacity of DIMM modules provide great Gen AI, VM, container and application density. The design of the server offers balanced expandability with up to 24 (plus 6 at rear) hot-swap 2.5" storage devices as well as up to eight PCIe 5.0 expansion slots. In order not to waste the disk capacity in the front of the chassis, the system also offers other advanced features such as SSD SATA M.2 devices for efficient boot requirements. PCIe 5.0 delivers double the I/O performance over PCle 4.0, provides 128 PCle lanes and satisfies voracious needs for east-west bandwidth. Moreover, the server can be equipped with different kinds of NVIDIA GPU cards like H100. The PRIMERGY RX2450 M2 comes with two redundant 900 - 2400W high-efficiency (Titanium Level) power supply units and in total six fan modules with speed control providing efficient system cooling.

Features & Benefits

Main Features

SECURE, HIGH PERFORMANCE COMPUTING

With up to 256 cores (per 2-socket configuration), 24 DIMMs DDR5, 6 TB memory capacity, CXL support as well as up to 24 storage devices plus 6 optional on the rear side, the PRIMERGY RX2450 M2 server delivers top performance for demanding Al apps and virtual machines (VMs) with unprecedented security.

EXPANDABILITY AND DENSITY

■ The server system offers the possibility of using up to 30x 2.5-inch storage devices (Front and rear). There is also the option of expanding the server using a total of 6x LP or up to 8 with raiser cards PCIe 5.0 slots. The server can be equipped with different kinds of NVIDIA GPU cards to support genrative AI, LLM macine learning and other performance apps

AGILE INFRASTRUCTURE MANAGEMENT

■ Infrastructure Manager (ISM) provides seamless, holistic management ensuring that IT infrastructures retain the dynamic flexibility required to support ever-changing business demands. Two versions of ISM are available. ISM Advanced is a powerful, fully featured version offering comprehensive infrastructure management capabilities such as support for multiple hardware configurations, physical and virtual network connection indicators and firmware baseline updates. A free entry-level version, ISM Essential, provides essential monitoring and firmware update of all supported devices, including servers, storage and network switches.

SECURITY

■ PRIMERGY RX2450 M2 equipped with AMD EPYC[™] processors boast a set of advanced security features, 256-bit AES-XTS encryption, and Secure Encrypted Virtualization (SEV). All of these features help minimize potential attack surfaces as software is booted and executed and processes your critical data.

Benefits

- The versatile PRIMERGY RX2450 M2 server with AMD EPYC[™] 9004 processors fastens time to value for IT organizations running demanding workloads.
- Agile and data-driven companies modern platforms that scale easily and are optimized for application performance. The PRIMERGY RX2450 M2 is built on the well known scalable system architecture and provides choice and flexibility to meet performance demands.
- As you scale your infrastructure, scale your profitability with Fujitsu Software Infrastructure Manager (ISM). ISM enables organizations to have centralized control over the infrastructure, which includes servers, storage, networking, cloud management software as well as power and cooling using a single user interface.
- Designed with security in mind, AMD EPYC[™] 9004 series processors help protect your CPU, applications, and data. With features such as AMD Secure Boot, there is an improved layer of security and firmware advanced persistent threats are mitigated. Platform Firmware Resilience is provided by the PRIMERGY RX2450 M2.

Notes	
Compatibility	If and to the extent a list of components or certain compatibilities are specified in the product data sheet, these component lists and compatibility specifications are exhaustive. Using deviating or other system components and applications together with the product may but does not necessarily have to lead to compatibility problems. A final statement and/or commitment on the compatibility of such deviating or other system components and applications can only be provided after a corresponding verification through a dedicated compatibility testing.
Continuity management	The product may in connection with and depending on the specific configuration include elements to support time and performance-critical applications, however high availability (e.g., 99.9999%) and failsafe performance is not a standalone product feature. If and to the extent the product is to be used in such business-critical environments, it is within the sole responsibility of the user to set up the specific additional technical features (e.g., Storage Cluster), redundancies, and operational conditions as required to ensure such high availability or failsafe performance.
Security	The properties of the product provide a baseline for product security and therefore end-customer IT security. However, these properties are not sufficient on their own to protect the product from all existing threats, such as intrusion attempts, data exfiltration and other forms of cyberattacks. To customize security settings, please use the configuration options as available for the respective product. During operation, the IT security of this product is within the responsibility of the respective administrator/end-user of the product. Please note, that Fujitsu as a manufacturer does not make any policy prescriptions or advocacy statements regarding IT security best practices and/or general product operation.
