Service Pack 20.2
Innovations

General information about BS2000 Service Packs

This document gives you an overview of the innovations included in Service Pack 20.2.

Starting with the release of SP 20.2, the current service pack with the expanded products and revised documentation is also displayed on the BS2000 manual server, including a release notice for the service pack.

Please note the new tab "Service Packs" on the entry page of the BS2000 manual server:

Detailed information on the new features of the individual products can be found from the release date in the corresponding release notices and manuals.

As usual, the content of the service pack is described in the delivery letter.

Innovations with Service Pack 20.2

Release: December 07, 2020

Product / component	Significant functional enhancements
BS2IDE Release 2.11.0[1]	■ New functionality Opposite Delegate - optional extension of the Remote Build Rule ■ Improved performance when saving the Code Folding State ■ Extensions for code completion (SDF and assembler editor) ■ Occurrence highlighting by double-clicking on local names (assembler editor) or on names in the procedure (SDF editor)
